

Hope you like it =)

Pek Kio Adventure starts here

Live AI Quest Blender-built 3D neighbourhood

01

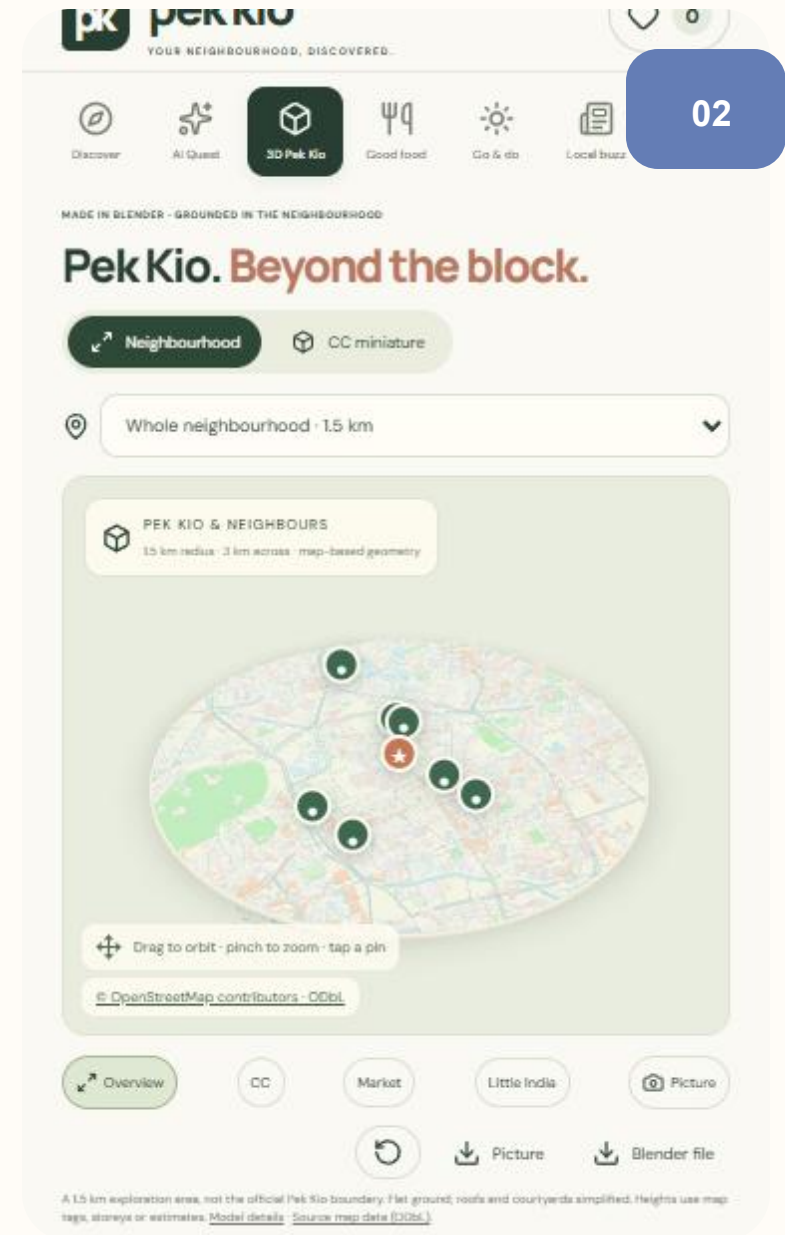

PROBLEM STATEMENT

An untold story: where heritage meets hidden gems

New residents face **scattered tips**, **generic search results** and **little local context**. That friction makes it harder to join the life already happening around them.

Pek Kio turns local knowledge into a welcoming first step

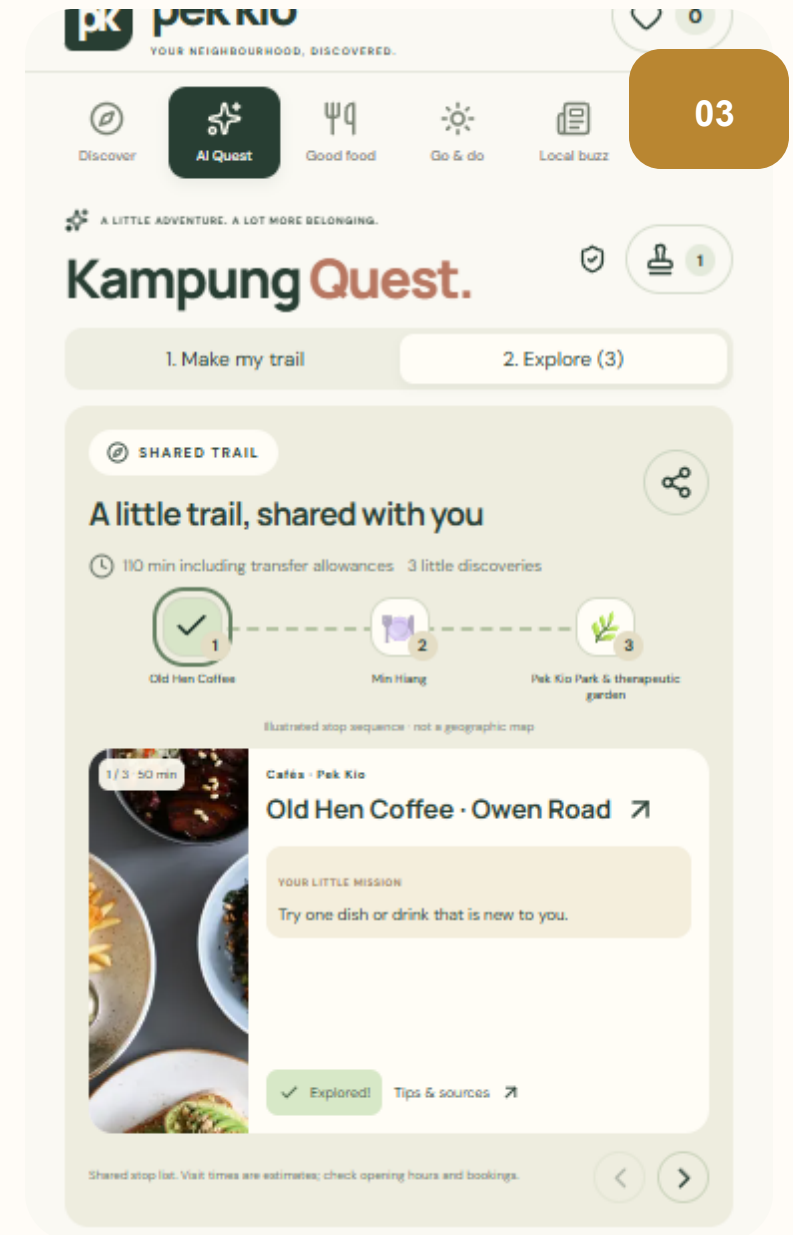

THE SOLUTION & IMPACT

One comprehensive guide for real local life

Our goal is simple. **Save residents 25 minutes every time they decide what to eat or do, help newcomers discover more than 25 local experiences immediately, and ultimately lift resident satisfaction.**

We don't just help people find Pek Kio - we help them feel at home.

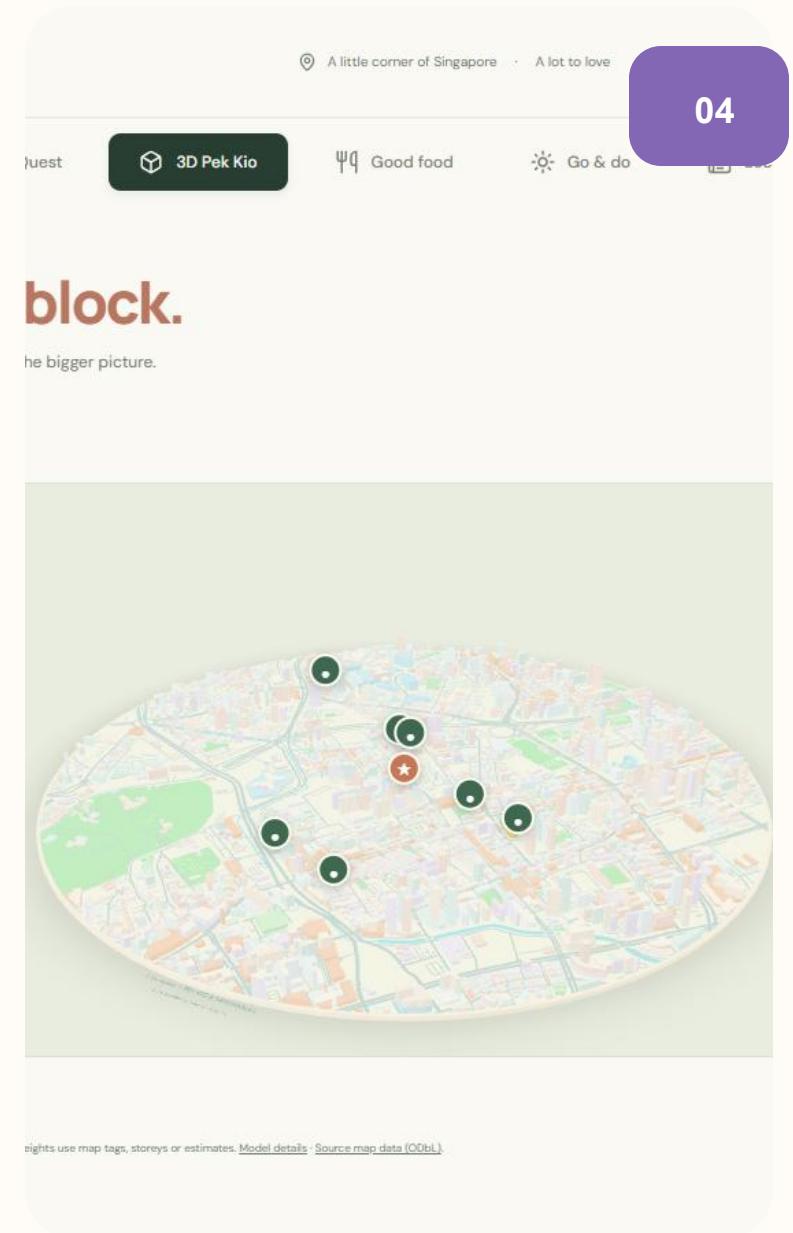

Simple and easy to use – Useful on a phone, playful enough to explore

AI intent meets a place you can see

AI Quest runs semantic matching in the browser with a MiniLM model. The 3D tab uses an interactive Blender model covering a 1.5 km radius, with landmark jumps and an editable download.

On-device AI OpenStreetMap geometry Blender asset

@SITES

A working site, ready for judges

We will show the site in three moves: ask AI Quest for a plan, open a real local listing, then fly across the 3D neighbourhood to Pek Kio CC and the market.
